Date: March 09th 2018 (Time: 10:30 to 5:30)

♦ About the workshop:

Research is a creative and systematic work undertaken to increase the stock of knowledge, including knowledge of humans, culture and society, and the use of this stock of knowledge to devise new applications. An experiment is a procedure carried out to support, refute, or validate a hypothesis. Experiments provide insight into cause-and-effect by demonstrating what outcome occurs when a particular factor is manipulated. Experiments typically include controls, which are designed to minimize the effects of variables other than single independent variable.

Meta-analysis is a statistical analysis that combines the results of multiple scientific studies. The basic tenet behind meta-analysis is that there is a common truth behind all conceptually similar scientific studies, but which has been measured with a certain error within individual studies. A key benefit of this approach is the aggregation of information leading to higher statistical power and more robust point estimate than is possible from the measure derived from any individual study.

This workshop is for the academicians, faculty and research scholars to enrich themselves about the procedure of meta-analysis and experimental research.

♦ Objective of the workshop: The main objective of the workshop is to develop the skill of meta-analysis.

♦ Registration: Interested candidates must fill registration forms on or before 7th March 2018 with fees and those whose registration is accepted through mail, may do spot registration with fees before 10:30 am on 09th March 2018.
